ABOUT ME

Software Engineer with four years of experience building high-volume fintech systems and contributing to AI model development. Skilled in React, Next.js, Node.js, Django, and PostgreSQL, with hands-on work in microservices architecture, payment integrations, and database performance. Brings a mix of production engineering and AI training experience, with a focus on reliable, scalable software.

WORK EXPERIENCE

Full Stack Developer – SantimPay — 2022 – 2026

- Developed core features of a digital payments platform, including POS systems, the UPI Wallet, and payment gateway integrations, using React, Redux, Next.js, Node.js, and PostgreSQL.
- Owned the Voucher product from design through release, delivering it end-to-end.
- Contributed to a microservices architecture and tuned database queries to hold performance under heavy transaction load.
- Supported a platform that has processed over 2 billion Birr in transactions, helping grow its merchant and customer base.

AI Trainer – Mercor — 2024 – Present

- Write and assess code samples covering REST API design, GitHub workflows, and version control practices to improve AI model output for developers.
- Provide structured technical reviews of model responses, judging code correctness, documentation quality, and practical usefulness.

AI Trainer – Outlier — 2025 – 2026

- Annotated, labeled, and reviewed large image and video datasets used to train and evaluate computer vision models.
- Performed object detection, segmentation, and classification tasks with a focus on accuracy, strengthening model performance on visual recognition benchmarks.

PROJECTS

AI Shopping Agent – Clothing Store

- Built an AI-powered shopping assistant for a clothing store that answers customer questions and helps shoppers find products through natural conversation.
- Developed the backend with FastAPI and integrated GPT-5 Mini, grounding the agent's responses in live product data stored in Supabase.
- Built the React chat interface for a smooth, real-time conversational shopping experience.

Clinic Management System

- Built a platform that replaced paper-based clinic tracking with digital patient records, live queues, lab requests, and billing.
- Developed the backend with Django 5.2, Django REST Framework, and Supabase (PostgreSQL + Auth), using Celery and Redis for background jobs and Chapa for payments; wrote the API documentation.
- Fixed Supabase auth and background-job issues to keep queues and billing in sync in real time; built the React frontend.

Gobez Tutoring Platform

- Built the cross-platform mobile app with Flutter for Gobez, a marketplace connecting parents with tutors.
- Developed the full-stack admin dashboard covering booking, user and tutor management, analytics, and financial reporting.
- Built a booking table searchable and filterable by name, subject, status, mode, and plan, with separate ongoing and history views so the operations team can triage active bookings quickly.
- Implemented revenue and booking analytics charts and role-based admin access with React and a REST API.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, Java, Dart, Ruby, SQL
- **Frontend & Mobile:** React, Redux, Next.js, Vue.js, Flutter, responsive web design
- **Backend:** Node.js, FastAPI, Django, Django REST Framework, Ruby on Rails, REST APIs, microservices, Celery, Redis
- **Databases & Cloud:** PostgreSQL, MySQL, MongoDB, Firebase, Supabase
- **AI & DevOps:** LLM integration (GPT-5 Mini), AI agents, AI model training and evaluation, data annotation, AI DevOps
- **Tools & Practices:** Git, GitHub workflows, Chapa payment integration, API documentation, RBAC

EDUCATION

Bachelor's Degree in Software Engineering – BITS College — 2022 – 2026
